

Atharv Dange

Full Stack Engineer | Open to Opportunities

atharvdange.dev@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#) | [Blogs](#)

Summary

Full-stack engineer with a solid core in the Node.js/Express ecosystem, complemented by a habit of deep-dive experimentation into emerging technologies like Bun, Hono, and Fastify. My approach is built on understanding “how it works” rather than just “how to use it,” leading me to build everything from custom HTTP frameworks to offline-first mobile tools.

Technical Stack

The Core: Node.js, Express.js, PostgreSQL, React/Next.js, TypeScript, MongoDB.

Exploratory: Bun, Hono, Fastify, React Native/Expo, SQLite, Puppeteer

Frontend: React.js, Next.js, React Native (Expo), TypeScript, Tailwind CSS

State & Data: TanStack Query, Zustand, Prisma, Mongoose.

Professional Experience

Software Engineer | Smartscripts Pvt. Ltd.

Mar 2024 - Present

- **Backend Architecture:** Designed and shipped the Node.js and PostgreSQL REST API powering the company’s core CRM, using a modular controller-service architecture to keep business logic isolated and maintainable as features scaled.

- **Frontend Leadership:** Led frontend and backend development for multiple production platforms, including a Smart Booking System, Digital Cards platform, and a WhatsApp Promotion application used by real customers.

Key Technologies: Node.js, PostgreSQL, Prisma, Next.js, React Native, TypeScript

Key Projects

ArchHive | Personal Digital Repository | [GitHub](#)

TypeScript, Hono, Bun, MongoDB, React Native, Puppeteer

- Architected a multi-platform knowledge management system (“second brain”) for text, links, and code snippets
- Implemented automatic content parsing, metadata extraction, screenshot generation with Puppeteer, and NLP-based tagging

Recon | Offline-First Bug Tracker | [GitHub](#)

React Native, Expo, SQLite, Skia

- Built offline-first defect tracking application with structured bug logging and severity/priority management
- Designed interactive timeline visualization using React Native Skia for bug lifecycle tracking
- Implemented “Nexus Events” system to flag critical updates and ensure team accountability

Reiatsu | Node.js Research Project | [GitHub](#)

Node.js, TypeScript

- Developed a zero-dependency HTTP framework using only Node.js core modules to master request/response lifecycles.
 - Implemented custom middleware pipelines and a multipart/form-data parser to understand low-level buffer handling.
-

Education

Bachelor of Engineering in Electronics & Telecommunication Sinhgad College of Engineering | Graduated July 2024
